

Eating disorders have the highest mortality rate of any mental illness, and anorexia is the third most common chronic illness amongst adolescents. Eating disorder complications can affect every organ and system of the body. Eating Disorder Complications include:

- **Cardiovascular/Circulatory.** *An estimated one-third of deaths due to anorexia nervosa are due to cardiac causes.* Symptoms may include bradycardia, cardiac arrhythmias, chest pain, mitral valve prolapse, myocardial infarction, blood abnormalities including reduced white or red blood cells, orthostatic hypotension, heart failure
- **Gastrointestinal:** cramps, bloating, constipation, diarrhea, gastroparesis, kidney infection/failure, liver failure, low platelet count due to liver dysfunction, cathartic colon
- **Musculoskeletal & Skin:** osteoporosis, weakness & fatigue, hair loss, lanugo, dental erosion & decay
- **Endocrine:** amenorrhea, iron deficiency/anemia, hypoglycemia, hyperglycemia, pre-diabetes, low testosterone, hyponatremia, hypokalemia, electrolyte imbalance, dehydration, vitamin and mineral deficiencies

SIGNS AND SYMPTOMS
